

# GenNext Select C & D

## Solutions to turf problems with natural and organic sources

GenNext Select C & D are organic plant nutrition products that naturally maximize a plant's ability to uptake essential ingredients and grow.

More than 40 years of research have resulted in this balanced turfgrass formulation, containing more than 3,000 multi-forming natural organic ingredients, microbiological bi-products, organic hormones, extracts, and enzyme complexes all delivered in a high energy humic/fulvic fertilizer carrier.

### Benefits of Feeding Your Turfgrass GenNext C & D Select:

- Increases turf density, health, and vitality by stimulating rapid development of rhizomes, stolons and roots that develop dense turfgrass
- Reduces broadleaf and grassy weeds, e.g. poa annua
- Creates stronger cell walls that provide plant armament to fight adversities including: drought, high temperature, high humidity, floods, wear and tear, etc.
- Less irrigation needed: potential reduction of 20% from previous season's needs
- Provides aggressive healing of damaged turf
- Increases decomposition in turf of accumulated surface mat and thatch

### What makes GenNext Select different?

When applied as a liquid, a small portion of GenNext Select is immediately absorbed through the leaves, usually resulting in a slight leaf blade greening and an overall turfgrass improvement. This can occur within several hours after application providing the grass is alive, soil moist and environmental conditions favorable.

The long-term responses occur from root absorption that can be seen within four-to-six weeks, or after two-or-three applications.

The active GenNext Select ingredients are released continuously through the soil and continue to provide turfgrass improvement over time.

When full-rate applications are made every two weeks during the growing season, the turfgrass will continue to respond uniformly.

**Derived solely from plant and plant processes, GenNext products do not have ANY potentially unsafe or undesirable characteristics.**

## GenNext Select is ideal for use in all soils

From fast draining soils and sand-based greens, to heavy clay soils and in-between soils, GenNext works.

GenNext Complete is specially formulated to meet the needs of all grasses, including: Bentgrass, Bermuda, Bluegrass, St. Augustine, Zoysia, and other turfgrass.

GenNext Complete helps maximize the opportunity for turfgrass to be dominant through aggressive lateral growth, thereby reducing and controlling undesirable grasses.

### Nutrient Analysis GenNext Select “C” Guaranteed Analysis 0-0-1

- Soluble Potash (K2O) 1.00%

### GenNext Select “D” Guaranteed Analysis 1-0-0

- Total Nitrogen (N) 1.00%
- 1.00% Water soluble Organic Nitrogen (urea triazone)

Nutrients derived from: Triazone

## How we package

GenNext Select comes packaged in two separate containers. The two-part product must be mixed together and diluted with water for optimum performance.

“ This year our greens were consistently faster, smoother and we had almost complete moss control without chemical applications. ”

Superintendent | Auburn, California

“ We have been plugging out undesirable turf on our greens for five years, with the strength of the primary turfgrass, enhanced by GenNext C&D, we didn’t have to plug any areas this year. ”

Superintendent | Philadelphia, Pennsylvania

## Tried, tested, and proven

GenNext Biotech’s unique formulations are the results of more than 40 years of consulting, research and development in turf management searching for the cause of problems, its cures, and preventions.
